Original Drainoflex-Rubber-Drain-Mats

Our most spectacular commisions!

The Carnival in cologne. We put the mats in front of the dome to prevent a slip of the horses. Sponsoring made by Drainoflex!

The castle Chantilly near Paris with the hipodrome and forest. We put the mats in a show ring in the museum in the castle from the Familie Yves Bienaime. They make horse shows there. Make a visit, it's very nice!

For the Majestät Sultan Zaboos Bin Said we sold 2000 qm rubber. A big deal to Oman!
The next deal to Oman was to the Royal Oman Police Mounted Divisional in Muscat!

Mats for the Metro Police Mounted Unit in Toronto, Kanada was very nice!

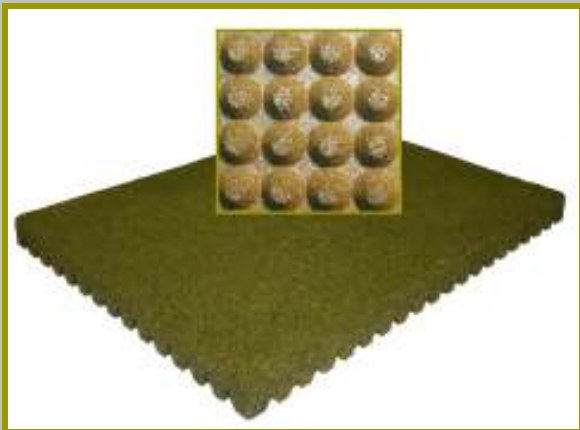

Mats for the Lufthansa-Horse-Transport-Containers, Very important!
After this deal we become KLM Nederlands and Flying Tigers, USA with Horse-Transport-Containers!

Spektakular too, but no pictures:

The king of Madrid, King Juan Carlos, or for the former president Mr. Betancourt in Columbia, or the the Horsehunter from the Queen Beatrix from the Nederlands.

Original Drainoflex-Rubber-Drain-Mats

Size: 1000 x 750 x 50 mm, Weight: 30 kg

The Original!

With the decisive advantages:

- ◆ Stable, round stilts
- ◆ Large drainage channels
- ◆ No edges or corners
- ◆ Frictionless draining
- ◆ Resistant to urine in the long-term
- ◆ Resistant to Vidia studs
- ◆ Considerable savings in bedding material
- ◆ Easy, fast cleaning
- ◆ 80 % less dung

Drainoflex stable floor coverings have been declared by experts to be future-oriented and are the right measures to be taken to sensibly counteract shortage of straw and personnel and dung problems. They ensure anti-slip, heat-storing, hygienic surfaces and facilitate procurement and storage of straw and dung.

The highly resistant mats are laid loosely in the horse box and can be combined to choice with straw, shavings, turf or saw dust. By using Drainoflex drainage stable floor coverings animals have been kept for more than 36 years in the appropriate, healthy and rational manner as demanded for horses.

The horses always have dry, elastic and warm bedding. Tension given through standing on hard ground is completely free of swellings. The hooves can no longer break off by pawing the ground end even when used for a longer period of time good conditions in the stable are ensured without ammoniac forming and the generation of stable outdoors.

The challenge against:

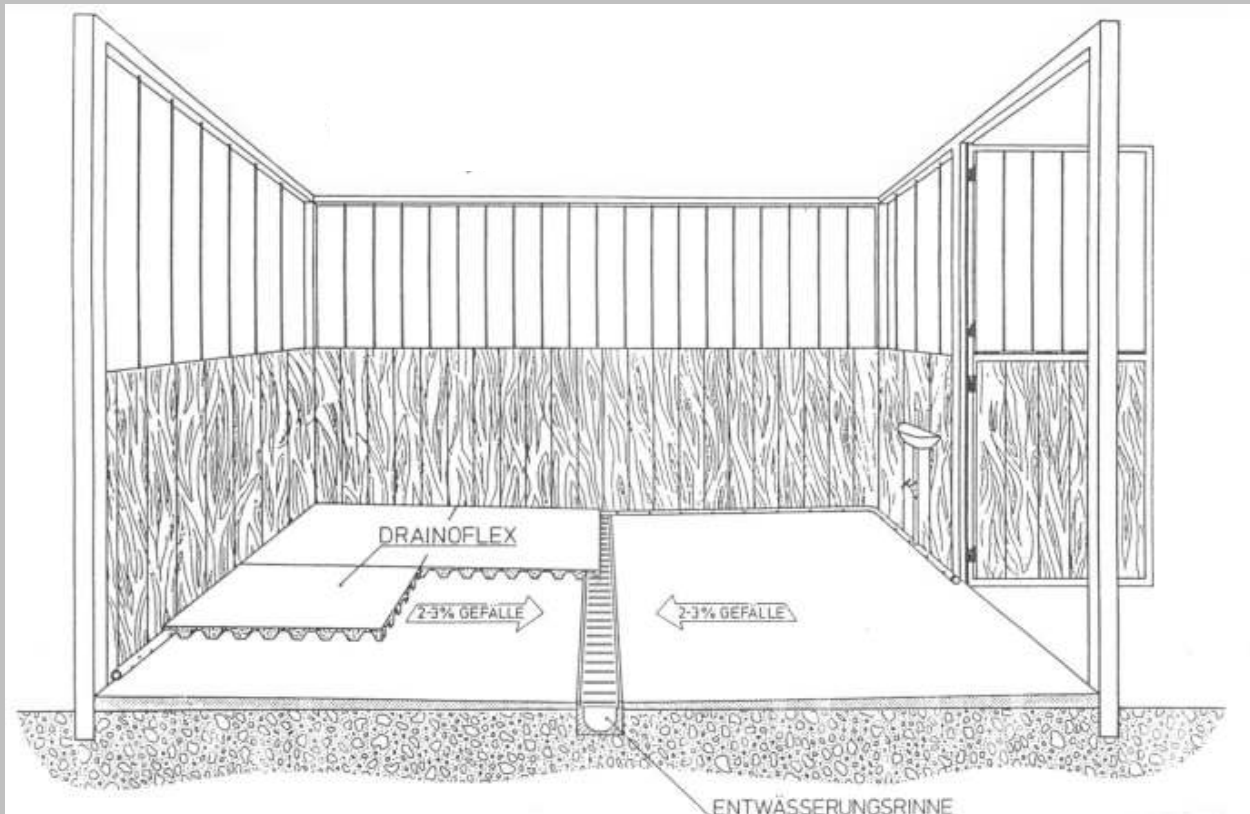

- ◆ Straw shortage
- ◆ Costly disposal
- ◆ Hard stand area
- ◆ Urine stench
- ◆ bare concrete floor

How to do the placing

By placing the Drainoflex Rubber Filter Mats one should follow the directions as here below: For the inset of Drainoflex Rubber Filter Mats it is presupposed to have a hard betonfloor with a flush of min. 2 % an a drainage or a drain ground. The drainage may be a grill, a groove or a split floor. If this presupposed should not be available in the horse box, one can by using our „Aco-groove“ quick and cost-effective rebuild the floor.

The Drainoflex Rubber Filter Mats are layed out on the box floor and stay there by their own weight and solid Construction. As a rule one starts at the door and lays so far as possible whole plates. The cutting from the plates after the measures of the boxes can be done with a carpet knife.

The daily cleansing is very easy. Remove the dung with broom and shovel. Two times a year put them completely out and clean them with a water-pressure-machine. Put the mats dry back. Don't forget to flush the groove.

Original Drainoflex-Rubber-Drain-Mats

For Open Stables and Running Stables

Drainoflex-Drainagemats are an absolutely reliable assistant for your Open-Stall or Playpen for the rest- and lying area in Sommer and Winter. The water drains at any time 100 %. Against all other Alternativ-Products, these mats if there are moist, have grip and the horses can't slip away. Despite of an open Surface you can clean them easily with a Broom.

Put the mats side by side, perhaps in Split. The mats are immediatelly ready to go. You need only 30 % of the original amout Straw. You can put everything or nothing on these mats for the horse and what the horse is needing.

For Wall Protection

Against Danger

Drainoflex stable wall covering is being used as a practicable wall protection against kicking in horse boxes for more than ten years now. It prevents many injuries (swollen joints and jars). The wall covering is durable and very resistant. The material does not wear out although it is very much stressed by the horses' kicking and it stays undamaged even after a period of ten years on the stable wall.

The material underneath (stonework: partition, walls) being protected by the Drainoflex wall covering and all noises of the horses' kicking are neutralized. Because of the fact that the wall covering can be kept clean easily (with a scrubber) even after years, the box appears always clean and well-cared. You don't have to go through the time-consuming and expensive procedure of painting the stable walls. Europe's riding celebrities and top ranking sportsmen rely on the Drainoflex wall covering for stables, already for many years. They know that by using the wall covering, they provide a safe abode in the stables for their very valuable horses.
